

SUNV Token Generation Event (TGE)

— Execution Checklist

This document provides a step-by-step checklist for executing the SUNV Token Generation Event (TGE), targeted for Q4 2026.

Phase 1: Pre-TGE Preparation (T-90 days)

Legal & Compliance

- ☐ Obtain legal opinion on token classification (utility vs. security)
- ☐ File Reg D / Reg S exemption forms with SEC (if applicable)
- ☐ Register entity in operating jurisdiction
- ☐ Prepare Terms of Service and Token Sale Agreement
- ☐ Implement KYC/AML verification (Sumsub or Persona)
- ☐ Configure OFAC sanctions screening and geo-blocking
- ☐ Prepare risk disclosure document for token holders
- ☐ Engage legal counsel for jurisdiction-specific compliance review

Security

- ☐ Complete CertiK or Hacken smart contract audit
- ☐ Resolve all audit findings and obtain final audit report
- ☐ Deploy contracts to Sepolia testnet for final verification
- ☐ Set up Gnosis Safe multisig wallets (2-of-3) for all allocation addresses:
 - Community & Ecosystem wallet
 - Team & Advisors wallet
 - Treasury wallet
 - Public Sale wallet
 - Private Sale wallet
 - Liquidity wallet
 - Staking Rewards wallet
- ☐ Fund deployer wallet with sufficient ETH for gas
- ☐ Store all private keys offline (hardware wallet + backup)
- ☐ Set up Immunefi bug bounty program (go live before TGE)

- [] Configure emergency pause procedures and document recovery plan

Technical

- [] Finalize all 5 smart contracts (Token, Staking, Governor, Timelock, FeeManager)
- [] Pass all tests on testnet (82 Solidity tests + 75 unit tests)
- [] Prepare deployment scripts for mainnet/Base L2
- [] Configure Etherscan API key for contract verification
- [] Set up Uniswap V3 pool creation plan (SUNV/ETH pair)
- [] Prepare liquidity locking plan (Team.Finance or UNCX, minimum 12 months)
- [] Set up Dune Analytics dashboard for supply tracking
- [] Deploy Forta monitoring bots
- [] Configure Discord/Telegram bot for contract event notifications

Marketing & Community

- [] Publish white paper PDF to website and GitHub
- [] Publish audit report publicly
- [] Set up social media accounts (Twitter/X, LinkedIn, Telegram, Discord)
- [] Create token landing page with:
 - Tokenomics breakdown
 - Allocation schedule
 - Vesting timeline
 - Audit report link
 - Contract addresses (post-deployment)
- [] Prepare press release for TGE announcement
- [] Schedule community AMA sessions
- [] Reach out to crypto media outlets (CoinDesk, CoinTelegraph, The Block)
- [] Create educational content about SUNV utility and governance
- [] Build email list for interested participants

Phase 2: Deployment (T-7 days)

Day 7: Final Testnet Run

- [] Execute full deployment sequence on Sepolia

- [] Verify all contract functions work correctly
- [] Test token transfers, staking, governance proposals
- [] Test fee manager with small amounts
- [] Test emergency pause and unpause
- [] Confirm all allocations are correct

Day 5: Mainnet Deployment

- [] Deploy SunveraToken to chosen network
- [] Verify token on Etherscan
- [] Confirm 100,000,000 SUNV minted and distributed to all 7 wallets
- [] Deploy SunveraStaking
- [] Deploy SunveraTimelock
- [] Deploy SunveraGovernor
- [] Deploy SunveraFeeManager
- [] Verify all contracts on Etherscan
- [] Record all contract addresses securely

Day 4: Configuration

- [] Link staking contract to token (setStakingContract)
- [] Link fee manager to staking contract
- [] Link governor to token contract
- [] Fund staking reward pool (5,000,000 SUNV)
- [] Verify governor proposal threshold (10,000 SUNV)
- [] Verify timelock delay (48 hours)
- [] Verify fee splits (80/10/10 for ETH, 5/95 for SUNV, 80/15/5 for marketplace)

Day 3: Liquidity Setup

- [] Create Uniswap V3 pool (SUNV/ETH, 0.3% fee tier)
- [] Add initial liquidity (5,000,000 SUNV + matching ETH from liquidity wallet)
- [] Lock LP tokens via Team.Finance or UNCX (12-month minimum)
- [] Verify pool is active and trading works
- [] Record Uniswap pool address for fee manager buyback integration

Day 2: Final Security Checks

- ☐ Confirm deployer has renounced all roles on contracts
- ☐ Verify multisig wallets are the only admin/treasury role holders
- ☐ Run final automated test suite
- ☐ Verify bug bounty is live on Immunefi
- ☐ Confirm all contract source code is verified on Etherscan
- ☐ Test emergency pause from multisig

Day 1: Go-Live Readiness

- ☐ Update website with contract addresses
- ☐ Publish token page with Etherscan links
- ☐ Prepare announcement for all social channels
- ☐ Brief team members on launch procedures
- ☐ Set up monitoring dashboards (Dune, Etherscan alerts)
- ☐ Confirm gas price strategy (avoid high gas periods)
- ☐ Prepare FAQ document for community questions

Phase 3: TGE Day (T-0)

Pre-Launch (T-2 hours)

- ☐ Final team briefing
- ☐ Confirm all multisig signers are available
- ☐ Check network gas prices (postpone if >50 gwei on mainnet)
- ☐ Verify all monitoring systems are active
- ☐ Prepare social media announcements (scheduled, not posted yet)

Launch (T-0)

- ☐ Confirm contracts are deployed and verified
- ☐ Confirm liquidity pool is active
- ☐ Confirm staking is available
- ☐ Post TGE announcement on all social channels:
 - Twitter/X: TGE announcement thread with contract addresses
 - Telegram: Announcement with staking instructions
 - Discord: Launch announcement in #announcements

- LinkedIn: Professional announcement
- [] Send press release to media outlets
- [] Update website with "LIVE" status
- [] Pin contract addresses and Etherscan links in all channels

Post-Launch (T+1 hour)

- [] Monitor Uniswap pool for trading activity
- [] Monitor gas prices and contract interactions
- [] Check for any unusual activity or failed transactions
- [] Respond to community questions in Discord/Telegram
- [] Monitor price stability (watch for extreme volatility)

Post-Launch (T+24 hours)

- [] Review all transaction data
- [] Confirm staking participation numbers
- [] Check governance interface is functional
- [] Monitor for any security alerts (Forta, Immunefi)
- [] Prepare day-1 summary report
- [] Update Dune Analytics dashboard

Phase 4: Post-TGE (T+1 to T+90)

Week 1

- [] Daily monitoring of contract activity
- [] Respond to any bug bounty submissions within 48 hours
- [] Community update post with TGE statistics
- [] Verify token is listed on tracking sites (CoinGecko, CoinMarketCap)
- [] Submit token listing requests to exchanges (if applicable)

Week 2-4

- [] First governance proposal (if community-driven)
- [] Staking statistics report
- [] Verify vesting schedules are tracking correctly
- [] Monitor liquidity pool health

- [] Begin community reward distribution (if applicable)

Month 2-3

- [] First quarterly transparency report
- [] Review and approve community governance proposals
- [] Execute first quarterly buyback-and-burn (after 90 days)
- [] Publish buyback-and-burn transaction proof
- [] Update white paper with progress milestones achieved
- [] Engage with institutional partners for Phase 5 (Institutional)

Emergency Procedures

Contract Pause

If a vulnerability is discovered: 1. Immediately pause token transfers:

```
token.connect(admin).pause()
```

 2. Pause fee manager:

```
feeManager.connect(admin).pause()
```

3. Notify community via all channels 4. Engage audit firm for emergency review 4. Deploy fix via governance (expedited if critical) 5. Unpause after fix is verified

Liquidity Emergency

If liquidity pool is attacked: 1. Pause token transfers to stop further exploitation 2. Contact Uniswap Labs if protocol-level issue 3. Notify Immunefi bounty hunters 4. Document all affected transactions 5. Prepare compensation plan if user funds are lost

Governance Attack

If governance is being captured: 1. Monitor for proposals from suspect addresses 2. If malicious proposal is submitted, rally community to vote AGAINST 3. The 48-hour timelock provides a window to respond 4. If proposal passes timelock, pause contracts as last resort 5. Engage legal counsel if criminal activity is involved

Key Contacts

- Technical Lead: [Assign]
- Security Contact: security@sunveracapital.com

- Legal Counsel: [Assign]
- Audit Firm: [CertiK or Hacken — TBD]
- Multisig Signers: [Assign 3 individuals]
- Community Manager: [Assign]

Contract Addresses (Fill After Deployment)

```

Network:           [mainnet / base / arbitrum]
Chain ID:          [1 / 8453 / 42161]
Deployment Date:   [YYYY-MM-DD]
Deployer:          [0x...]

SunveraToken:      [0x...]
SunveraStaking:    [0x...]
SunveraTimelock:   [0x...]
SunveraGovernor:   [0x...]
SunveraFeeManager: [0x...]
Uniswap V3 Pool:   [0x...]

Allocation Wallets:
  Community:        [0x...]
  Team:             [0x...]
  Treasury:         [0x...]
  Public Sale:      [0x...]
  Private Sale:     [0x...]
  Liquidity:        [0x...]
  Staking:          [0x...]

LP Lock:           [Team.Finance / UNCX ID]
Bug Bounty:        https://immunefi.com/bounty/sunveracapital
  
```

Budget Estimate

Item	Estimated Cost (USD)
CertiK audit	\$25,000 - \$35,000
Bug bounty pool	\$50,000
Legal opinion	\$10,000 - \$20,000
KYC/AML integration	\$2,000 - \$5,000

Item	Estimated Cost (USD)
Liquidity (ETH for pool)	Variable (market-dependent)
LP locking service	\$500 - \$1,500
Gas (deployment, mainnet)	\$450 - \$780
Gas (deployment, Base L2)	\$10 - \$50
Marketing & PR	\$5,000 - \$15,000
Dune Analytics (paid)	\$500/month
Forta monitoring	\$500/month
Etherscan API	Free (standard tier)
Total (excl. liquidity)	\$94,000 - \$128,000

Note: Liquidity ETH is the largest variable cost. At least 10-20 ETH recommended for initial pool on mainnet, or 1-5 ETH on L2.

Vesting Schedule Reference

Allocation	Amount	Vesting
Community & Ecosystem	35,000,000 SUNV (35%)	Released over 3 years via staking rewards and grants
Team & Advisors	20,000,000 SUNV (20%)	12-month cliff, then 36-month linear vesting
Treasury	15,000,000 SUNV (15%)	Governance-controlled, no fixed vesting
Public Sale	12,000,000 SUNV (12%)	25% at TGE, 75% over 6 months
Private Sale	8,000,000 SUNV (8%)	6-month cliff, then 18-month linear vesting
Liquidity	5,000,000 SUNV (5%)	100% at TGE (locked in Uniswap pool)
Staking Rewards		Released over 5 years via staking APY

Allocation	Amount	Vesting
	5,000,000 SUNV (5%)	

Vesting is enforced off-chain via multisig time-locks. On-chain vesting contracts can be deployed if institutional investors require it.
